DETAILED ACTION

Claim Objections

 Claim 11 is objected to because of the following informalities: Claim 11 states to be dependent on itself; the applicant probably meant to make it dependent on claim 10.
 Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- Claims 1-6 are rejected under 35 U.S.C. 102 (b) as being anticipated by Imbert (6027482).

Concerning claims 1, 4, and 5, Imbert discloses a medical syringe (10) comprising a syringe unit having a lure (22) and syringe body (12), and a cylindrical connection member (44) slidably and detachably disposed, said member increasing holding power of said lure (Fig 1).

Concerning claims 2 and 6, in addition to the above disclosure, Imbert discloses a connection member (44) that is slidable along the lure tip while remaining engaged to said luer tip (Fig 1).

Concerning claim 3, Imbert discloses the connection member can be removed from engagement by sliding it off (Fig 1).

Art Unit: 3763

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 5. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- Claims 7-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Imbert.

Concerning claim 7, 8, 13, 14, and 15, in addition to the above disclosure, Imbert

Application/Control Number: 10/571,011

Art Unit: 3763

discloses a contact part (323) of larger diameter than the lure and prevents the connection member from sliding to close to tip of the lure part. It would have been obvious to one of ordinary skill in the art at the time of the invention to use an elastic body such as a spring or rubber, for the contact part and to include spiral grooves to facilitate movement of the connection member over said contact part (Fig 10).

Concerning claim 9, in addition to the above disclosure, it would have been obvious to one of ordinary skill in the art at the time of the invention that the connection member would be fitted onto the lure with enough force that its own weight would not pull it past the contact part.

Concerning claims 10, 11, and 12, in addition to the above disclosure, Fig 1 and Fig 10 of Imbert shows that the connection member has two holes one to be go over the contact part and to stay there and the other to interface with another device, the holes being the first and second members respectively, there is a contact part on a tapered lure, and a locking mechanism that is threaded.

Concerning claims 16-19, in addition to the above disclosure, it would have been obvious to one of ordinary skill in the art at the time of the invention to make the spiral grooves of the contact part fit with the threads of the connection member to easily detach and attach the connection member. It would have further been obvious to one of ordinary skill in the art at the time of the invention that the grooves and engaging threads may switch locations and the same function is provided.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to PRITESH PATEL whose telephone number is (571)270-7025. The examiner can normally be reached on Monday-Friday 7:30Am-5:00PM, every other Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nicholas Lucchesi can be reached on (571)272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
